PROFILE

Customer-focused technical support specialist with a strong background in diagnosing software bugs, backend troubleshooting, and cross-functional support. Skilled at translating client needs into actionable solutions and collaborating closely with engineering teams to resolve complex issues. Experienced in using SQL, .NET, AWS, and JavaScript frameworks to support platform stability and enhance user experience, with a strong emphasis on understanding technical systems and workflows.

EXPERIENCE

Technical Support Specialist – StarRez, Inc.

Sep 2024 - Present

- Delivered technical support via live sessions, resolving software configuration and integration issues.
- Diagnosed issues using SQL, .NET, C#, and AWS tools with DataDog.
- Created SQL queries for reporting and automation within housing systems.
- Collaborated with engineering to resolve escalations and improve performance.
- Maintained internal documentation and led advanced feature walkthroughs.
- Used Salesforce to manage client accounts, track support cases, and ensure proactive communication and satisfaction.
- Reduced average case resolution time by 25% through proactive follow-up and automation improvements.
- Consistently recognized by clients and internal teams for clear communication and efficient troubleshooting during live sessions.

JR Software Engineer – Divisions Management Group (Contract)

Feb 2023 – July 2023

- Resolved full-stack client issues and submitted code enhancements via pull requests.
- Automated reporting and data validation with PowerShell and SQL.
- Worked with REST APIs, Kafka, Ubuntu, and deployment environments.
- Tracked issues in JIRA and ensured SLA alignment.
- Implemented PowerShell scripts that cut manual reporting time by over 60%.
- Maintained 100% SLA compliance across all assigned development tickets.

Technical Solutions Consultant – Xtremepush (Contract)

Sept 2022 – Nov 2022

- Created and maintained SDK onboarding documentation.
- Supported clients using PHP, Python, JavaScript, HTML/CSS, and React.
- Troubleshoot complex API issues and maintained SLA standards via Zendesk.
- Improved API issue resolution time by collaborating with backend engineers and enhancing knowledge base documentation.
- Helped streamline onboarding for 10+ clients through optimized SDK setup resources.

Application Support Engineer – Optimizely

May 2021 – July 2022

- Resolved .NET, MVC, and C# bugs across client and internal platforms.
- Utilized MSSQL, WCF, WebForms, and front-end technologies for support.
- Authored documentation for internal use and customer education.
- Ensured performance monitoring and preemptive fixes.
- Created reusable troubleshooting guides that decreased repeat tickets by 30%.
- Flagged and resolved a critical platform bug affecting over 100 users.

Technical Software Support - Veracross

April 2020 – May 2021

- Managed tickets through Zendesk, using SQL for data diagnosis.
- Created technical documentation to communicate solutions to engineers.
- Collaborated in real-time support sessions and tracked compatibility issues.
- Led SQL-driven insights that helped identify long-term trends in user behavior and system crashes.
- Recognized for mentoring new support hires during onboarding sessions.
